

# Flyer Information Sheet

I am searching for a company that produce the orange and black flying ring pictured at left. Material: 20 durometer, high strength silicone. I will also need the product packaging (box) produced, the product inserted, and any box flaps that can be opened need to be sealed with a clear, round, self adhesive label. We don't want the flap(s) easily opened so the product can be removed and stolen. Essentially, the product is ready to be shipped to customers or stores. The price quote needs to be for 1,000 packaged flyers shipped via UPS to Raleigh, NC USA. The landed cost, including shipping, cannot exceed \$3.25 US. Mold cost would be quoted separately.

I plan to launch this project on Indiegogo. These estimates are to determine feasibility. If the product cannot be made and landed for the price indicated above, the product would be priced too high for retail sales, and the project could not move forward. I appreciate your input.

The ring is 6.50" in diameter with a 3.50" hole. It is made of 20 durometer, high strength silicone. An .stp file is available.

The hang tab, which is now 2.5" in the box prototype above will be decreased to 1.25". The box dimensions will also be changed to 6.750" x 1.250" x 6.750" I will supply the graphics to fit box template.
